

Cardiology Science Lunch Berlin

a regular exchange of insights and ideas in cardiovascular medicine

~ since 2015 ~

Mitral Valve Repair - An Interventional Approach -

Prof. Dr. med. Dietrich Pfeiffer

Universitätsklinikum Leipzig, Dept. of Cardiology

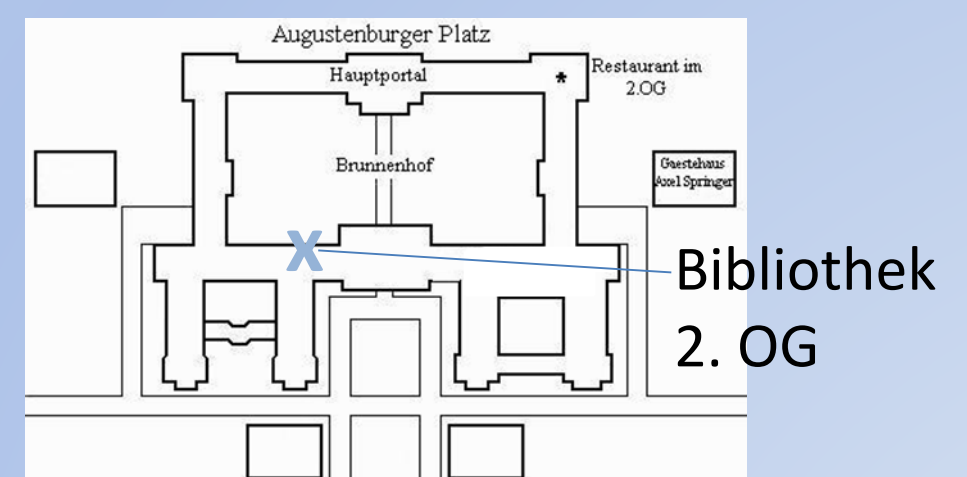

Mitral regurgitation (MR) is a common contributor to heart failure. Functional regurgitation occurs when the left ventricle is enlarged thus displacing the papillary muscles and stretching the mitral valve annulus, while the leaflets may be still intact (secondary MR). For symptomatic patients with severe secondary MR surgical repair is an option which may be limited by the patient's overall condition. Prof. Pfeiffer will talk about interventional (catheter-based) mitral annuloplasty including a novel approach (Carillon[®] device) and discuss his experience in the field.

Wednesday, 25.04.2018

12:00 – 13:00h

Bibliothek at DHZB

Augustenburger Platz 1, Berlin

The Cardiology Science Lunch Team

from the Department of Cardiology, Charité Universitätsmedizin, Campus Virchow-Klinikum, Berlin
and the Department of Medicine/Cardiology, Deutsches Herzzentrum Berlin

Prof. Dr. med. Frank R. Heinzel, Ph.D.

Dr. Paulina Wakula, Ph.D.

Christina Gaulhofer, BSc. MSc.

Prof. Dr. med. Philipp Stawowy

Univ. Prof. Dr. med. Burkert Pieske
